Mouse Port/Serial

Four Button Mouse for PCs and Compatibles

A Mouse So Smart it Thinks.

Double-click with just one click. Open files, directories and applications with just one click. Even insert a block of text with just one click. A unique four-button design and advanced MouseWorks™ software make it possible. We didn't take any shortcuts...but now you can.

SMARTER SOFTWARE

① No more double-clicking.

Now you can open files, directories and applications with one easy click. This feature means you'll never double-click again!

② If you can type it.

One click can print and save a document, or insert a block of text. Anything you can type on the keyboard, Thinking Mouse can do with just one easy click.

③ How slow can you go?

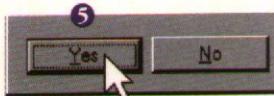

Temporarily slow down the cursor for pixel-by-pixel control. Makes detailed work easier and less tiring.

④ Dragging no longer a drag.

The hardest mouse action is now the easiest. Drag, scroll or highlight without having to hold down the mouse button.

⑤ Right on the button.

When a dialog box appears, you want the cursor on the default button. Our *Snap to Default* feature moves the cursor there automatically.

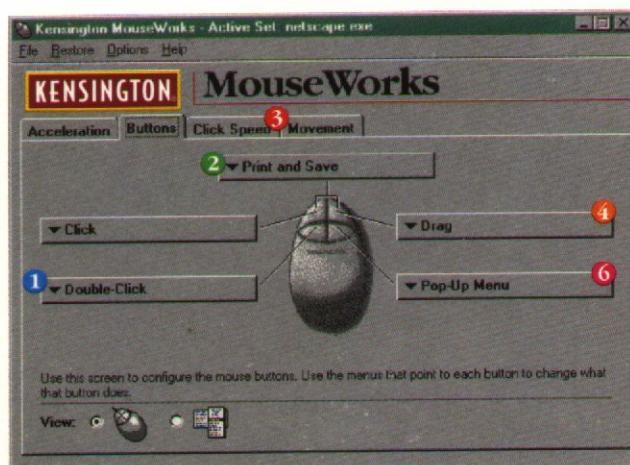

Satisfaction Guaranteed. 90-Day Trial.

Thinking Mouse comes with a five-year warranty, toll-free technical support and a no-risk 90-day trial. If for any reason you are not completely satisfied, Kensington will do its best to resolve the problem or will cheerfully refund your money.

SMARTER HARDWARE

Four buttons

Two buttons for normal mouse tasks. Two extra buttons to do what *you* want, like double-clicking.

Rounded edges.

Rounded edges are more natural and comfortable. They don't dig into your hand—something you will appreciate after hours of use.

Symmetrical tapered design.

Thinking Mouse is perfect for both right- and left-handed users. And the gently curved shape is narrower in the front and wider in the back, naturally fitting the shape of your hand.

EasyGrip™ sides.

Thinking Mouse is designed with EasyGrip sides to offer better control and comfort.
